

Moving Forward: A Look at How the Regulatory Climate Impacts Change

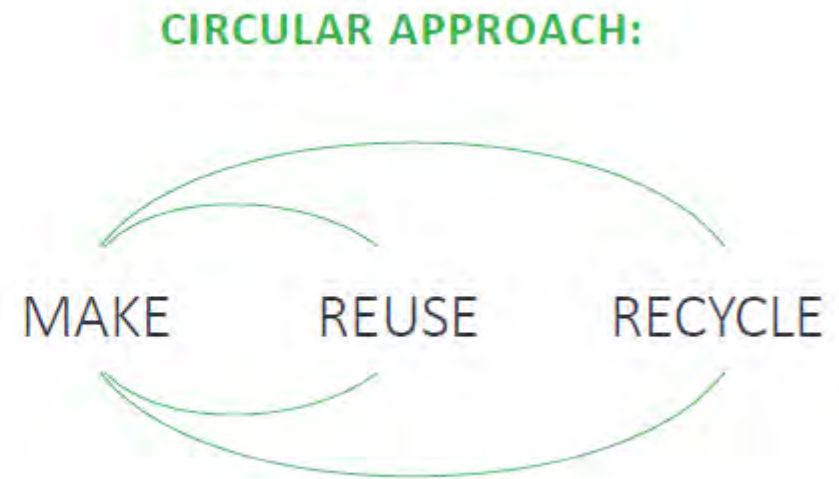

Marci Kinter

Vice President – Government Affairs

SGIA

Moving Toward a Circular Economy..

Key Drivers

- Toxics in the product
- Recyclability of the product
- Use of alternative or “sustainable” substrates

Which in turn... leads to discussions on

- Certifications...
- Recyclability of systems
- Technical issues associated with printing...

HOT TOPIC: Toxics

Lets spend a few minutes on...

- Implications of Prop 65's new warning requirements
- Release of Inadvertent PCBs...
- State initiatives to develop mandated recycled content for packages and other materials

transparency
is the first step towards
accountability

Transparency

Prop 65's new warning requirements

- Customers seeking more and more information on ingredients
- Requesting “Prop 65 Certifications”
- Printers – pushing back these requests to ink and other chemical manufacturers

Inadvertent PCBs in ink systems

- This is a recycling – water effluent – issue!
- Washington State Procurement Policy
- Leading to further discussions by other states on similar policies

State mandated recycling initiatives

- EPR – Maine, Washington state, California
- CA state efforts
